

## **Personal Mission Statement**

- My mission is to express creativity and find unique solutions for applications used by mobile devices. Will do this by completing the Full Sail U BSCS Mobile App development degree by early 2018 with a GPA above 3.8. Use the tools available at Full Sail to re-brand my current IT track from database administrator to mobile applications developer.
- I value commitment, enthusiasm, integrity and initiative when developing applications. By expanding my networking circle plan to establish a professional practice to develop mobile app components before Spring 2018.

## **TEM Mission Statement**

Two of my goals are to be part of the top 5% of the Full Sail Mobile Application Development Class that will graduate early in 2018. Knowing first-hand the sacrifices required to become a master developer during three decades of systems and applications development experience, being motivated to adapt prior development approaches to the current and agile software construction environments, expect to reach my two goals: top of class plus graduate before 2018. That is my current mission. Furthermore, plan on consistently and with determination welcome all the areas of study that develop the expertise required for efficient and effective construction of newer mobile application user interfaces. Being attentive to learn digital design, art, animation, multimedia and new techniques for portability. Also expect to cooperate with other students to form creative and dependable products. Will encourage with energy and enthusiasm other class members.

## My first Android App -Hello World
