What have you done?

For me, this week has been about evaluating ePortfolio setup. Since these are dynamic, developmental spaces representing the professional 'self' on the Web and they are becoming standard practice for professionals, they must be setup correctly.

So I have been evaluating where to store the examples of skills, achievements, youtube clips, presentations, documents as well as a reflective blog element. I do not like cloud storage. To me putting personal information at a global stage that is constantly under hacker attack is not something I desire.

Moreover, last week as if someone had turned on a light bulb, as I was reading some of the articles it dawned on me that my cyber foot print is outdated.

So have been working on a plan to migrate what I have to an appropriate ePortfolio component.

Desisted on the Gantt to Excel plan because it will not work. Will have to remove most of the items that will make this approach desirable. So it is not worth the effort.

Still thinking about inspirational quotes. But I do enjoy this type of research and selection. It truly brings to the forefront the truth of the statement 'I only know that I know nothing'.

What are you doing?

Right now, as written above, one of my goals is the establishment of my ePortfolio environment and move to it the items I have been working on since the start of this degree. The C# snippets of code, the video presentations, some of my history of art essays, the different environments being established for my different courses such as Xamarin, GitHub, LinkedIn, Safari Books, AIGA, Lynda, TED Talks and some more.

What's Next?

Further research the establishment of the ePortfolio and its components. Keep the Career Module tasks and activities current. Deliver on time the assignments and complete the inspirational quotes research. Participate in the comment section with remarks on entries made by other classmates.

How TO?

Start to populate the ePortfolio with objects. I already have several items that will need to be moved. Continue to read and research about ePortfolios for the mobile app age and tailor mine accordingly.
