Summary

My goal is to continue my career in the ever changing IT world: provide a bridge between the new and current technologies with proven, reliable and not too sexy legacy world.

Recently began a new chapter in my IT skill set by enrolling in a BSCS Mobile Development program at Full Sail University. My first mobile app was built in the mid 90's, trying to bridge mainframe data with cell phones(SAG's EntireX provided the MOM). Back then we used WML (wireless mark up language) and we had 14 columns with 4 rows to display data.

Well let me see what an iPhone 6+ screen will look like when the apps connect user with mainframe data on the go. It'll interesting, fun, rewarding and satisfying having bridged the two centuries of IT technology.

Took time between August 2010 and January 2011 to obtain a commercial class A driver license to fulfill a long dream of commandeering a 80k lbs rig across the US.

However must maintain certain level of expenses so to this end, back to the office. I am a seasoned database administrator with solid experience in building test scripts, ETL utilities, and building black, white or grey box and regressive testing environments.

A builder, member and active contributor of high performance teams acting as Team Leader, Mentor, and Motivator who thrives in environments requiring a high level strategist and a big picture thinker. Proven Project Management skills utilized in driving profitable and cost effective collaboration between IT and critical business functions.

Some of my career highlights are:

Provide highest level of technical support for customers in Fortune 500 companies globally.
